

Smart Traffic Mana

Efficiently handles data related t

Data: collection of raw facts related to traffic.

Data structure: organised way to store and manage data

Examples:
1. Vehicle count
2. speed
3. signal timing
4. Road condition
5. accident records

Types:
1. Structures: combination of different data types
2. Arrays: store vehicle counts over time.
3. Linked list: dynamic list of vehicles.
4. Trees: road network hierachy.
5. Graphs: intersections and road.
